3.3 CG series

3.3.1 Properties of the linear guideways, series CG

The HIWIN linear guideways of the CG series with O-arrangement of the ball tracks guarantee high torque loading capacity, especially in the M_x direction. The modified track geometry ensures high load ratings. The new flexible end seal automatically adjusts itself to the rail contour and ensures a high, permanent dust protection.

To protect the end seal against mechanical damage, the CG series is equipped with a sheet metal scraper in front of the end seal as standard.

Optionally, a cover strip is available – the entry of dust and wear of the sealing lip are thus permanently reduced to a minimum. With the help of a mounting tool the cover strip is installed in a few easy steps.

For optimum lubricant distribution the block has an additional lubrication path which leads the lubricant into the middle of the carrying zone. This ensures long relubrication intervals and a significant advantage especially in short stroke applications.

3.3.2 Design of the CG series

Free of play 4-row recirculation ball bearing guide with best dust protection already in the standard version.

Easy mounting, better protection against entry of dust and against wear of the end seal due to cover strip.
Optimized lubrication concept for long relubrication intervals and short stroke applications.

O-arrangement and optimized geometry of ball bearing guide for high torque loading capacity and high load ratings.
Advantages:
- Free of play
- Interchangeable
- High accuracy
- High torque loading capacity, especially rolling moment M_x
- Optional with cover strip

3.3.3 Order codes for the CG series

For CG linear guideways, a distinction is made between fully assembled and unmounted models. The dimensions of both models are the same. The main difference is that the block and rail in the unmounted models can be freely interchanged. Block and rail can be ordered separately and fitted by the customer. Their accuracy extends to class P.

Note:
[1] The figure 2 is also a quantity, i.e. one item of the above-mentioned article consists of a pair of rails. No number is specified for individual rails.
   By default multi-part rails are delivered with staggered butt joints.
[2] You will find an overview of the individual sealing systems on Page 22

3.3.4 Block types

HIWIN provides square and flange blocks for its linear guideways. Given their low
height and larger mounting surface, flange blocks are better suited to large loads.

| Table 3.41 **Block types**				
Type	Series/size	Structure	Height [mm]	Typical application
Square type	CGH-CA CGH-HA		28 – 70	○ Woodworking ○ Machining centres ○ NC lathes ○ Grinding machines ○ Precision milling machines ○ High-performance cutting machines
Flange type	CGW-CA CGW-HA		24 – 60	○ Automation technology ○ Transport technology ○ Measuring technology ○ Machines and equipment requiring high positioning accuracy

3.3.6 Preload

Definition

Every rail type can be preloaded based on the size of the balls. The curve shows that
the rigidity doubles at higher preload. The CG series offers three standard preload
classes for various applications and conditions.

Z0
Elastic deformation
without preload

ZB
Elastic deformation
with high preload

Elastic deformation

P   Operating load

Preload ID

ID	Preload		Application	Sample applications
Table 3.43 **Preload ID**				
Z0	Light preload	$0 - 0.02\ C_{dyn}$	Constant load direction, little vibration, lower accuracy needed	○ Transport technology ○ Automatic packaging machines ○ X-Y axis in industrial machines ○ Welding machines
ZA	Medium preload	$0.05 - 0.07\ C_{dyn}$	High accuracy needed	○ Machining centres ○ Z axes for industrial machines ○ Eroding machines ○ NC lathes ○ Precision X-Y tables ○ Measuring technology
ZB	High preload	above $0.1\ C_{dyn}$	High rigidity needed, vibration and impact	○ Machining centres ○ Grinding machines ○ NC lathes ○ Horizontal and vertical milling machines ○ Z axis of machine tools ○ High-performance cutting machines

3.3.7 Load ratings and torques

Table 3.44 **Load ratings and torques for series CG**

CGR35T	34	31.85	M8	17	80	4,000	3,920	178	9	71	7.14
CGR45T	45	39.85	M12	24	105	4,000	3,885	234	12	93	11.51

Note:
1. The tolerance for E is +0.5 to −1 mm for standard rails and 0 to −0.3 mm for joints.
2. If the $E_{1/2}$ dimensions are not indicated, the maximum possible number of mounting holes will be determined under consideration of $E_{1/2}$ min.
3. The rails are shortened to the required length. If the $E_{1/2}$ dimensions are not indicated, these will be carried out symmetrically.

Linear guideways

3.3.10.3 Calculating the length of rails

HIWIN offers rails in customized lengths. To prevent the risk of the end of the rail becoming unstable, the value E must not exceed half of the distance between the mounting holes (P). At the same time, the value $E_{1/2}$ should be between $E_{1/2}$ min and $E_{1/2}$ max so that the mounting hole does not rupture.
F 3.8

$$L = (n - 1) \times P + E_1 + E_2$$

L   Total length of the rail [mm]
n   Number of mounting holes
P   Distance between two mounting holes [mm]
$E_{1/2}$ Distance from the middle of the last mounting hole to the end of the rail [mm]

3.3.10.4 Tightening torques for mounting bolts

Insufficient tightening of the mounting bolts strongly compromises the precision of the linear guideway; the following tightening torques are therefore recommended for the relevant screw sizes.

Table 3.50 **Tightening torques of the mounting bolts according to ISO 4762-12.9**

Series/size	Screw size	Torque [Nm]	Series/size	Screw size	Torque [Nm]
CG_15	M4 × 20	4	CG_30	M10	70
CG_20	M5 × 25	9	CG_35	M8 × 40	31

Table 3.54 **Total length of blocks with different sealing systems**

Unit: mm

3.3.12 Tolerances depending on accuracy class

The CG series is available in five accuracy classes depending on parallelism between block and rail, height accuracy H and accuracy of width N. The choice of accuracy class is determined by the machine requirements.
3.3.12.1 Parallelism

Parallelism of stop surfaces D and B of block and rail and parallelism of top of block
C to mounting surface A of rail. Ideal linear guideway installation is required, as is a
measurement in the centre of the block.

Rail length [mm]	Accuracy class				
	C	H	P	SP	UP
– 100	12	7	3	2	2
100 – 200	14	9	4	2	2
200 – 300	15	10	5	3	2
300 – 500	17	12	6	3	2
500 – 700	20	13	7	4	2
700 – 900	22	15	8	5	3
900 – 1100	24	16	9	6	3
1100 – 1500	26	18	11	7	4
1500 – 1900	28	20	13	8	4
1900 – 2500	31	22	15	10	5
2500 – 3100	33	25	18	11	6
3100 – 3600	36	27	20	14	7
3600 – 4000	37	28	21	15	7

Table 3.55 **Tolerance of parallelism between block and rail**

Unit: µm

Linear guideways

CG series

3.3.12.2 Accuracy – height and width

Height tolerance of H

Permissible absolute dimension variance of height H, measured between centre of screw-on surface C and underside of rail A, with block in any position on the rail.

Height variance of H

Permissible variance of height H between several blocks on a rail, measured in the same rail position.

Width tolerance of N

Permissible absolute dimension variance of width N, measured between centre of screw-on surfaces D and B, with block in any position on the rail.

Width variance of N

Permissible variance of width N between several blocks on a rail, measured in the same rail position.

Table 3.56 **Height and width tolerances**

| Series/size	Accuracy class	Height tolerance of H (T_H)	Width tolerance of N	Height variance of H	Width variance of N
CG_15, 20	C (Normal)	± 0.1	± 0.1	0.02	0.02

Unit: mm

[1] Fully assembled linear guideway
[2] Unmounted linear guideway

3.3.12.3 Permissible mounting surface tolerances

Once the requirements relating to the accuracy of the mounting surfaces are met, the good accuracy, rigidity and lifetime of the CG series linear guideways are achieved.
Tolerance for the parallelism of the reference surface (P):

Table 3.57 **Maximum tolerance for parallelism (P)**			
Series/size	Preload class		
	Z0	ZA	ZB
CG_15	9	5	4
CG_20	11	7	5
CG_25	12	8	6
CG_30	14	9	7
CG_35	15	11	8
CG_45	19	12	10
Unit: µm			

Tolerance for the height of the reference surface (S_1)

F 3.9

$$S_1 = a \times K - T_H$$

S_1 Max. height tolerance [mm]
a   Distance between rails [mm]
K   Coefficient of the height tolerance
T_H Tolerance of height H acc. to Table 3.56

| Table 3.58 **Coefficient of height tolerance (K)**			
Series/size	Preload class		
	Z0	ZA	ZB
CG_15 – CG_45	2.8×10^{-4}	1.7×10^{-4}	1.2×10^{-4}

Note: If $S_1 < 0$, select another tolerance class!

Linear guideways

CG series

Height tolerance of the block mounting surface:

o   The height tolerance of the reference surface in the parallel use of two or more blocks (S_2)

◻	0.010

Accuracy requirement for
all block-mounting reference surfaces

F 3.10

$$S_2 = b \times K$$

S_2 Max. height tolerance [mm]
b   Distance between blocks [mm]
K   Coefficient of the height tolerance

o   The height tolerance of the reference surface in the parallel use of two or more blocks (S_3)

◻	0.010

Accuracy requirement for
all block-mounting reference surfaces

F 3.11

$$S_3 = c \times K$$

S_3 Max. height tolerance [mm]
c   Distance between blocks [mm]
K   Coefficient of the height tolerance

Table 3.59 **Coefficient of height tolerance (K)**		
Series/size	**Load type**	
	CG_C	CG_H
CG_15 – CG_45	4.2×10^{-5}	3.0×10^{-5}

76

3.3.13 Shoulder heights and fillets

Imprecise shoulder heights and fillets of mounting surfaces compromise precision and may lead to conflicts with the block or rail profiles. The following shoulder heights and edge profiles must be observed in order to avoid assembly problems.

Table 3.60 **Shoulder heights and fillets**				
Series/size	Max. edge radius r	Shoulder height of reference edge of rail E_1	Shoulder height of reference edge of block E_2	Clearance under block H_1
CG_15	0.5	3.0	4.0	4.3
CG_20	0.5	3.5	5.0	4.6
CG_25	1.0	5.0	5.0	6.1
CG_30	1.0	5.0	5.0	7.0
CG_35	1.0	6.0	6.0	7.6
CG_45	1.0	8.0	8.0	9.5

Unit: mm

Linear guideways

WE and QW series

3.4 WE and QW series

3.4.1 Properties of the linear guideway, series WE and QW

The HIWIN linear guideways of the WE series are based on proven HIWIN technology. Their large rail width and low installation height permit a compact design and high torque loading capacity.

The models of the QW series with SynchMotion™ technology offer all the advantages of the standard series WE. Controlled movement of the balls at a defined distance also results in improved synchronous performance, higher reliable travel speeds, extended lubrication intervals and less running noise. Since the installation dimensions of the QW blocks are identical to those of the WE blocks, they are also fitted on the WER standard rail and can therefore be interchanged with ease. For more information, refer to .

3.4.2 Design of the WE/QW series

o 4-row recirculation ball bearing guide
o 45° contact angle
o Ball retainers prevent the balls from falling out when the block is removed
o Low installation height
o Wide linear guideway for high torque loading capacity
o Large mounting surface on block
o SynchMotion™ technology (QW series)
Design of the WE series

Design of the QW series

Advantages:

o Compact and low-cost design thanks to high torque loading capacity
o High efficiency thanks to low friction losses

Additional advantages of QW series:

o Improved synchronous performance
o Optimized for higher travel speeds
o Extended lubrication intervals
o Less running noise
o Higher dynamic load capacities

50 % wider than standard series

2-row mounting holes
o The block's large mounting surface supports the transfer of higher torques
o The 45° arrangement of ball tracks permits high loading from all directions
